Qualifying Pallets & Multipaks

Ascernity + Medallion SC Multipak
1 - Ascernity 1 gal.
2 - Medallion® SC fungicide 1 gal.

Winter Solution Pallet
5 - Posterity XT + Ascernity Multipaks
1 - Posterity XT case
2 - Instrata cases
Purchase ≥ 2 Winter Solution Pallets
to receive volume pricing.

Posterity XT + Ascernity Multipak
1 - Posterity XT 2.5 gal.
1 - Ascernity 1 gal.

Warm-Season Herbicide Solution Pallet
1 - Barricade® 4FL herbicide LinkPak
1 - Monument 75WG case

Featured Guarantees

Purchases of the products on page one are foundational products for the following GreenTrust 365 guarantee programs:

Spring Dead Spot + Take-all Root Rot Guarantee

Spring dead spot and take-all root rot are among the most damaging diseases of bermudagrass putting greens throughout the transition zone. These diseases attack during the fall and spring when bermudagrass is growing slowly, with the potential to cause long-term reductions in playability. Both diseases begin to damage roots in the late summer to fall, so this is the best time to begin preventative fungicide programs.

- * Take-all root rot activity begins to rise in late summer when soil temperatures are consistently below 80°F. Typically August 15 to September 15 depending on location.
- * Spring dead spot activity begins in late summer to fall when soil temperatures drop to 70°F or less.

With proper application timing and the best selection of products, take-all root rot and spring dead spot can be managed very effectively as part of a program approach. Syngenta has developed the recommended program through years of research with the leading universities in the transition zone. Preventive late summer to fall fungicide applications, prior to dormancy, are recommended to protect the turf from pathogen attack and ensure acceptable turf quality in the spring.

Preventive Fairy Ring Guarantee

Protect your greens with the **Syngenta Fairy Ring Guarantee**. Fairy ring is a fungal disease that causes irregular patches of discoloration and stunted growth on the golf course. The disease can sometimes be very difficult to control with fungicides. For the best fairy ring control, a preventive strategy should be used. When you follow this preventive fungicide guarantee developed by Syngenta experts, tailored to your region as noted below, you are guaranteed season-long fairy ring control.*

Bermudagrass and Transition Putting Greens	Chipping Bermudagrass Putting Greens
Applications	Applications

Snow Mold Guarantee

Snow mold pressure can vary, but our Snow Mold Guarantee Program ensures your course is ready for an early spring opening. We offer tailored solutions to fit your current control and budget needs. The industry standard, **Intrepid®** fungicide, provides up to 150 days of pink and grey snow mold control. For courses with lower pressure, choose from 90 to 110 days of guaranteed control. Our team stands behind every program, guaranteeing effective snow mold control.

Protect your Greens and Tees for up to 150 days

Keeping your greens and tees protected during the winter months is critical. Intrepid® fungicide is the industry standard for preventing snow mold on golf courses. It provides up to 150 days of pink and grey snow mold control as well as protecting during periods of disease such as anthracnose. By controlling these winter pathogens, Intrepid® reduces the risk of \$200 to \$300 per 1,000 ft² of damage from snow mold.

Powerful combination for up to 110 days of control
