

Foltec SG MINORS

END USER LAUNCH PROGRAM

3 CASES EARNS YOU A \$75 AMAZON GIFT CARD!

Following the successful 2016 launch of the Foltec SG product line, The Andersons is proud to introduce the newest member of the Foltec SG family: Foltec SG Minors. Foltec SG Minors is a proprietary combination of dry, soluble granules that contains selected secondary and minor elements, along with sea plant extract and humate from UltraMate SG. This product can be tank mixed with any of the Foltec SG formulas and would also be a great addition to mix with HCU™ (Humic Coated Urea). In recognition of the support of the Foltec SG Minors product launch, The Andersons is pleased to make an introductory offer of a \$75 Amazon eGift card based on the purchase of three cases of Foltec SG Minors during the program period.
